

AwaazPay Jese Idea Ko Implement Karne Ka Tariqa

□ Step 1: Problem + Feature Finalization

- Identify key problems: e.g., **elderly logon ko banking mushkil lagti hai**, aur **RAAST adoption low hai**.
 - Finalize features:
 - Voice-based commands (Urdu)
 - Balance inquiry
 - Money transfer via RAAST
 - Voice onboarding (CNIC OCR + mic input)
 - Merchant dashboard
-

□ Step 2: Tech Stack Choose Karna

Tumhara stack ho sakta hai:

Layer	Tool
Frontend	React.js (Tailwind for styling)
Voice Input	Google Speech-to-Text API (supports Urdu)
Backend	Node.js + Express
Database	PostgreSQL or MongoDB
APIs	Allied Bank Open Banking APIs + RAAST
Hosting	Vercel (Frontend), Railway/Render (Backend)

□ Step 3: Development Flow (MVP)

1. Frontend UI (React)

- Create simple components:
 - Mic button to start voice command
 - Display for balance, history, etc.
 - Merchant screen for incoming RAAST payments

2. Voice Integration

- Use Google Speech-to-Text:
 - Start mic
 - Convert Urdu speech to text
 - Extract intent like:
 - “Balance batayein” → `GET_BALANCE`

- “Ali ko 1000 rupees bhejein” → `TRANSFER_MONEY`
- Use keyword-based logic or NLP (like Dialogflow or Rasa)

3. Backend API (Node + Express)

- Create secure endpoints:
 - `/balance` → fetch user balance via Allied API
 - `/transfer` → trigger fund transfer via RAAST or OpenBanking
 - `/onboarding` → OCR + save user
 - `/verifyVoice` → Optional voice auth

4. Database

- Users, merchants, transaction logs
- Track voice sessions (optional)

5. Security

- Use JWT for login sessions
- Optional: Speaker recognition (Voice biometric)

6. Integrate Allied Bank APIs

- Use their Developer Portal to:
 - Access account details
 - Transfer funds
 - KYC verification
- Use sandbox/testing environment to simulate transactions

7. RAAST Integration

- If APIs available: use for **real-time instant transfer**
- Otherwise: simulate the process and pitch it as scalable with SBP approval

□ Step 4: Testing

- Test mic on different devices
- Test RAAST flow and mock payment confirmation
- Try Urdu voice in noisy environment

□ Step 5: Final Touches

- Polish UI
- Add error messages in Urdu
- Include WhatsApp/SMS summary
- Prepare your **pitch deck + demo video**
